

My name is Shaden Rami Alsaifi, a fifth-year Chemical Engineering student at the University of Jordan.

I have a strong passion for applying scientific principles to solve real-world problems, particularly in the fields of sustainability, energy, and industrial process development.

I am currently not employed, but I am highly motivated to gain practical experience that will support my academic growth and future career path.

Recently, I participated in the Career Readiness Program, which had a significant impact on my personal and professional development.

Through this program, I developed key employability skills such as effective communication, time management, teamwork, and CV writing.

I also gained a clearer understanding of the job market, how to prepare for interviews, and how to present myself professionally.

These experiences have boosted my confidence and better prepared me to pursue meaningful opportunities in my field.

This training opportunity represents an important step in bridging the gap between academic knowledge and practical experience.

I am eager to apply what I have learned and continue developing my skills in a real-world environment.
